Profile

As Senior Test Manager I have been assigned to several major SAP projects at a strategic and at an operational level for the past 20 years and with responsibility for planning, execution and reporting of tests, where I collaborate with many different IT suppliers and with many different cultural collaborators. I manage, all aspects of the test management processes at either project- or program level and outline the framework for test and is responsible for the entire test process.

I advise customers on Test strategy and Test concepts.

- How a strategy turned into operational mode by proven methods and tools such as TPI Next®.
- Participation in the subsequent work on planning and building the customer's Test concept, including implementation in the most smoothly and cost-conscious way in accordance with the organization's stated goals and requirements.

Related to the preparation of the test concept at e.g., Arla Foods, I planned and operationalized the automated test strategy and participated in contract negotiation on testing automation tools.

During all implementation phases, I included training in the use of Solution Manager as a test tool, including quality assurance of test documentation. In addition, I have had the professional responsibility of a smaller offshore team associated with Test Consultants and test performers in relation to Releases and Regression Testing.

I have in the last 5 years further worked with test and test strategies within infrastructure for customer in the bank sector and the experiences from the Infrastructure and Non-infrastructure work area have given the best utilization and benefit with a solid value for my customers.

In my work of working, I mainly use methods and tools such as TPI Next® and ISTQB® Based on an ISTQB® Foundation Certification and Attendance in Advanced Test Management (ATM) ISTQB® Course

Professional skills

- Very solid experience with Test management
- Construction and structure of a Test concept
- Training / convey knowledge and training in the use of Solution Manager 7.1 and 7.2 Test suite
- HP QC for test and requirements
- VSTS / Visual Studio for test case, user stories, features, and Backlog items
- Experience and knowledge about automation of test cases
- Technical understanding of technical platforms
- Solve complex issues
- Deep and broad business understanding
- Group dynamics and Composition

Personal skills

- Extremely structured
- Communicate on a high level in Danish and English
- High degree of self-dependence
- Motivation and inclusion of colleagues / project participants
- Enterprising, outgoing, and service minded

Arla Foods

Period: June 2013 – July 2016

Role: Senior Test manager

General description: Building a comprehensive structured and fundamental Test concept from the bottom for Arla Foods IT department (GBS IT).

As Senior Test Manager at Arla Foods, I implemented and anchored the Test concept in the organization and in the individual Business Units. I used methodologies like the TPI Next® and ISTQB® framework tool with Test Policies, Test Strategies, Test Plans, Test Design and Test Procedures and Processes. During Test Management, I worked with activities and tasks such as risk analysis related to test strategy and test plans including estimation, test results, Test reports and evaluations, as well as management documentation for the monthly and 2 major annual releases on SAP.

As responsible for the Arla Foods Test Management department, the tasks across the IT department covered:

- Development of Test Management from Strategy to operationalization.
- Implementation of automation of test cases to determine test requirements for the projects
- Mapping between Test Management and Project Model
- Creating close collaboration with both the Project Department, Release Management and Applications and Support departments, and not least, IT suppliers.

In Arla Food's main contract with IT suppliers, I was also responsible for ensuring that suppliers complied with their contractual deliveries in relation to tests and releases.

In addition, I have had the professional responsibility of a smaller offshore team in India and onsite in Aarhus, allocated by the supplier as testers relating to releases and regression tests

Further, I was responsible for implementing and anchoring the test concepts in the various Business Units, including training of testers from the Business in the use of Solution Manager 7.1 as a testing tool.

Building test concept

- Includes Test policy, Test strategies, master test plan and level test plan within the ISTQB® framework

- Strategy of Test Data Management and SAP Best Practice - Performance Strategy
- Testing Processes and procedures
- Quality assurance for the projects in collaboration with the Release management team before implementation in the productive systems
- Concept for projects with transferring test scope to supplier
- Defining and completion of templates with associated processes
- Defining naming convention for documentation in both SharePoint and Solution Manager

Build and structure the test organization

- Building internal testing organization with professional informal management of test coordinators
- Defined and described roles and responsibility for the test coordinators job description in collaboration with their department manager
- Building up an Off-Shore Test Organization in India in cooperation with Supplier Test Delivery Lead based on their contract and delivery obligation

Test management and test execution

- Test Management and execution were conducted in conjunction with the large half-yearly releases as well as the minor releases during every month
- Control of the automated and manual test suites
- Management reporting and reporting of the test progress and metrics for different interest groups
- Planning of the verification test operated by Test supplier's
- Participation in planning internal support function validation testing in the productive systems
- Chairperson

Solution Manager

- Simple configuration and utilization of Solution Manager 7.1 as a test tool
- Process setup and defects management
- Creating projects

Training and introduction to test and the Test concept

- Introduction and training on-site around in Europe and by e-class training using Skype
- Test managers/Project managers allocated to projects
- Test Coordinators in their role and responsibility and to test processes and procedures and as well as in the use of Solution Manager
- Brush-up courses for testers in the use of Solution Manager

Business Partners

- Close collaboration with internal departments: Release Management, Program Management Office, Solution Architects, technical consultants and Business Units
- Close collaboration with external suppliers, which are part of the Multi-Vendor Agreement for the IT Department

Additional tools

- Create and maintenance of Test Management Intranet site in SharePoint

Other Tasks

- Project manager on assignments related to reorganization of the IT Organization

ECCO (Applicon)

Period: Jun 2012 – November 2012 / January 2013 – May 2013

Consultant role: Senior Test manager

General description: Test concept for ECCO
